

VAISHNAVI JAGTAP

Data Engineer | Python, PySpark, Databricks, ETL/ELT, NLP Document Parsing

Paris, France | +33 745 300 022 | vaishnavi.jagtap@edu.dsti.institute | linkedin.com/in/vaishnavi-jagtap-de | github.com/vaimeraki | Portfolio: vaimeraki.github.io

PROFESSIONAL PROFILE

Data engineer with hands-on experience building and operating ETL/ELT pipelines, from raw data collection through to production dashboards. At DatumLocus, an agriculture-focused data company, built and maintained multi-source data pipelines (20+ sources, including USDA NASS agricultural datasets) and delivered client-facing Power BI dashboards used daily by business stakeholders. Full-stack proficiency across Python, SQL, Spark, dbt, Airflow, Docker, and TypeScript. Authorised to work in France (APS).

TECHNICAL SKILLS

Data Pipelines: ETL/ELT, Apache Spark, PySpark, Databricks (notebooks, jobs), dbt (models, tests), Airflow (DAGs), Delta Lake, data quality, batch processing

Languages & Tools: Python (Pandas, NumPy), SQL (PostgreSQL), Java, Scala (working knowledge), Git, GitLab CI/CD, Docker

Data Collection & NLP: REST APIs, web scraping, PDF/Excel ingestion, document parsing & NLP preprocessing, validation (Great Expectations, Pydantic)

Visualisation: Power BI (KPI dashboards, drill-down), Tableau, Looker, React/TypeScript (Chart.js), Azure SQL Database

Cloud: Azure (basics), AWS S3 (basics), MinIO

PROFESSIONAL EXPERIENCE

Data Engineer Intern / Data Systems Engineer

Lille, France | Jan 2025 – Jan 2026

DatumLocus (agriculture-focused data company)

- Built and delivered multi-source ETL pipelines on agricultural data (20+ sources incl. USDA NASS) for clients across the world.
- Built forecasting dashboards per client, covering prices, production, and consumption, using multi-model pipelines (feature engineering, model selection) used daily by 5–10 stakeholders; improved accuracy by resolving data gaps/noise and explaining seasonal, weather-driven demand swings.
- Built and hosted 3 client dashboards in TypeScript on Microsoft Azure (Azure SQL Database).
- Developed Databricks notebooks using PySpark for large-scale data transformation, and built document parsing/NLP preprocessing pipelines for semi-structured inputs.
- Implemented structured logging (Elasticsearch), test suites (Pytest), and Airflow DAG orchestration; integrated GitLab CI/CD and Docker, reducing debugging time by 30%.

Scientific Data Trainee

Pune, India | Feb 2022 – May 2023

Inter-University Centre for Astronomy and Astrophysics (IUCAA)

- Extracted and processed satellite data from ISSDC/ISRO archives and interfaced with NASA's HEASARC Parameter Interface Library to support AstroSat-CZTI data analysis.
- Led the release of pipeline version 3.0, automating data retrieval and processing workflows in Python, C, and C++; resolved memory leaks with Valgrind, improving performance by 25%.
- Maintained technical documentation and mentored two junior trainees on the data pipeline codebase.

Software Developer Intern

Pune, India | Jan 2021 – Jun 2021

KonsepWorks

- Modernised legacy PHP applications and integrated secure PayPal APIs, supporting live client systems during a mandatory internship for an earlier Master's degree.

PROJECTS

AI-Powered Energy Intelligence Platform

Ongoing - github.com/vaimeraki

- Building a data platform ingesting real EU energy market data (ENTSO-E, Eurostat) using Spark, dbt (raw/silver/gold), and Airflow, with LLM-based RAG for natural-language insight generation.

EDUCATION

MSc Applied Data Engineering for AI

2023 – 2025

DSTI School of Engineering, France

Thesis: NLP-based Book Rating & Recommendation System — deployed on AWS

MSc Scientific Computing

2019 – 2021

University of Pune, India

Research: Circulant Matrices in Public-Key Cryptography — algebraic cryptography, NTL/C++

BSc Computer Science

2016 – 2019

University of Pune, India

Projects: Event Manager (Java, Swing), Campus Placement System (PHP)
